## Cohort Methodology

Academic Year = Indicates the academic year in which the first term of the below transfer level course attempt occurred. The 3-year limit for each student was defined by the actual term of the first below transfer level attempt so that all students had equal time frames within which to complete the transfer level course. Grouping by academic year is done for display purposes and did not factor into the query.
Notes:

* All students in their first credit basic skills course (English or math) within the year
* Excludes non-credit in the cohort unless they were previously in non-credit and are now in their first credit basic skills course
* Basic skills definition in this study uses credit math or English not coded as transfer level (avoids issue of how basic skills is coded)
* Doesn't matter when they started in college or how many courses they are taking or have taken (Widest possible group, purposefully not screened for goal or "transfer intent"; hopefully catching the early focus on basic skills) Does exclude who those who already have a degree.
* Did not look at ESL and reading (included if coded to Eng. TOP code-very few colleges)

Measures for "Gold Standard"

Progress Rate (students) = Percent of students who did not already have a college degree (AA/AS or higher) and attempted any below transfer level credit English or math course and subsequently completed a transfer level course in the same discipline with a grade of C - or better within 3 years after the first term of the below transfer level attempt.

Average Change (colleges) = Overall change during the time period or the slope of the regression line using years as the independent variable. It is the average annual change across three cohorts (math and English separately).

Andrew LaManque, Ph.D., Interim Director, Institutional Research, FHDA, November 17, 2009
