

Appendix F — Analytical Support and Transparency

This report was developed through a combination of institutional data analysis, collaborative task force engagement, and structured model development.

As part of this process, ChatGPT (GPT-5.3) was used as an analytical support tool to assist with:

- Structuring report sections and organizing content
- Translating meeting notes into coherent narrative form
- Supporting clarity and consistency across document sections

All analytical conclusions, model structures, and findings presented in this report are derived from institutional data, task force discussions, and source materials provided by the author. The use of ChatGPT supported the organization and articulation of this work but did not generate independent conclusions or substitute for institutional analysis.
