

Appendix D — Sample Student Pathways

To test the practical viability of the Version 4 time-block scheduling model, the task force developed sample student pathways across multiple disciplines, including Biology, Chemistry, Mathematics, Business, and Psychology.

These pathways were constructed using faculty-developed program maps and typical course sequencing patterns. The purpose of this work was to evaluate whether students could enroll in required combinations of courses within the Version 4 framework without unintended scheduling conflicts, while maintaining full-time enrollment and making timely progress toward degree or transfer completion.

The pathway testing focused on several key questions:

- Can students combine five-unit, four-unit, and laboratory courses within a single term?
- Can students enroll in multiple laboratory courses concurrently where required by program pathways?
- Are course sequences offered in patterns that allow students to progress without delay?
- Does the model support both structured pathways and varied student scheduling needs?

Across all sample pathways, the task force found that students are able to build complete schedules within the block structure. Required courses, general education courses, and electives can be scheduled in complementary blocks without overlap.

In STEM pathways, the model supports concurrent enrollment in laboratory courses across disciplines, which is necessary for timely progression in programs such as Biology and Chemistry. The preservation of four laboratory blocks per day was a critical factor in maintaining this capacity.

In Mathematics and other high-unit pathways, the model allows for continuous progression through required sequences while still accommodating general education requirements.

In Business and other non-STEM pathways, the model supports flexibility in course selection, including the ability to incorporate afternoon and evening options where needed.

These pathway examples are illustrative rather than exhaustive. However, they reflect common enrollment patterns and demonstrate that the Version 4 structure is capable of supporting student progression across a range of academic programs.

Chemistry Transfer Plan (no ADT)
